LU-2810A-70BB-JEUX0071

Straight Seamer, 1-needle, Lockstitch Machine with Vertical-axis 2.7 Fold-Capacity Hook

JEUX

This machine is used in the production of automotive interiors, upholstered furniture or for a variety of technical textiles. The variety of possibilities allows for adjustment and a high flexibility in production.

Equipped with Juki's LU-2828 or LU-2810 head this machine has the combined benefits associated with this flat-bed sewing machine.

The machine is equipped with a conveyor system, which ensured a stable transportation of material synchronous to the feed of the needle. All straight seams are executed to a high degree of precision.

The graphic control panel has a programmed memory so that individual seam programs can be created and executed. Very fast and easy interface allows the operator to switch between different products and material specifications.

The accurate feeding system for straight seams ensure a high quality finish expected in the production of automotive interiors and furniture.

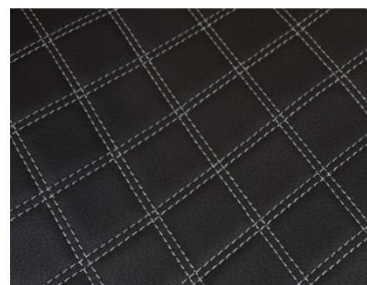

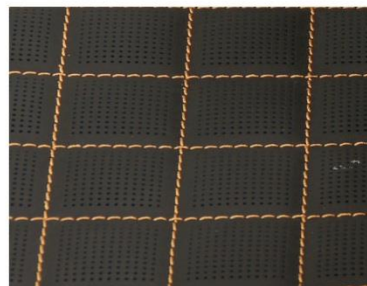

Other model heads from the Juki LU-2800 series are capable of being installed with the straight seamer upon request. This allows for the variety of possible patterns to be drastically increased.

There is precise stitching when sewing a single needle or in two-needle machine, symmetrical and parallel straight seams are carried out to perforation.

The line laser system can help with material placement and it is possible to individually switch on laser on or off depending on the requirements of the operator.

Benefits:

- First machine with short remaining thread (<5mm)
- Highest accuracy and re productivity of cross seams
- Automatic sensor controlled edge detection of material for start and end of process
- Lasers ensure accurate positioning of the material everytime
- Stable material feeding with upper and lower conveyors
- Variety of different programs available (multiple designs possible)
- Significantly reduced maintenance costs

Produced in cooperation with
KMF Maschinenbau.
